rev. March 2019
Talking Points

General information about the program, need for data sharing, etc.
ClinGen Data Sharing Program Talking Points:

- ClinGen, an NIH-funded resource, is working to better understand the relationship between genetics and health to improve patient care and research. This effort relies on gathering more information through data sharing.
- Team members from ClinGen are working with ***PIN Name*** to give you the option to share your anonymous genetic and health information with others who will use it to improve patient care and genetic testing.
  - Why is data sharing needed?
    - When a genetic change (variant) is found for the first time, often little is known about it. It may be unclear if that genetic change causes health concerns. Data sharing can help us better understand these genetic changes and can help others get clearer genetic testing.
    - Even if a genetic variant is well understood, data sharing helps increase understanding of a condition’s features, which may help identify possible interventions and treatments.
    - The more information collected, the better researchers will understand how genes affect health and, ultimately, how best to care for patients.
    - As we learn more about genetic changes, their relationship with health and disease (interpretation) may change. Individuals that share data through ClinGen can decide if they would like to receive updates about their genetic test results from the ClinGen team.
  - Data sharing is safe and secure. Only deidentified information (meaning that it does not include your name, birthday, or other identifiers) is shared through the program.
- To share your data, you don’t have to do much more than you already are to participate in ***PIN NAME***.
  - You will be asked to:
    - Complete the ClinGen Data Sharing Program Consent
    - Upload a copy of your genetic testing report
    - Decide whether you would like to receive updates to your test results from the ClinGen team.
    - In the future, we may ask you to potentially complete optional, additional health history questions
If a registry participant opts in, they would be asked to **upload a copy** of their genetic testing report to their registry account for the ClinGen genetic counselors to review. ClinGen team may contact participants or ask participants to complete additional, optional survey(s).

ClinGen’s team will review participants’ genetic test reports to pull out information about any variants reported.

ClinGen’s team will submit de-identified genetic and health information collected from the registry to publicly available databases. ClinGen Expert Panels and Curation Groups can have access to this deidentified data.

These groups have the option to receive updates regarding data sharing.
Social Media Posts

Social media is a great way to engage potential participants and family. Included are sample posts and graphics for posts.

Consider posting once a week!
Visit the **PIN NAME (LINK)** to help us by sharing your data. We need your help and sharing is safe and secure! Spread the word with others in the **CONDITION NAME** communities by sharing this post! Learn more [here](#).

Visit the **PIN NAME (LINK)** to share your data safely and securely. Choose to share by taking the ClinGen Data Sharing Program Survey in your registry account. Help push research forward! Learn more [here](#).

Visit the **PIN NAME (LINK)** to share your data. If you choose to share your data safely and securely, you can sign up to get updates as more is learned about your genetic test results.

---

Data sharing can ...

- Increase our understanding of creatine deficiencies, which may help identify possible interventions and treatments
- Help us better understand genetic changes in families with creatine deficiencies
- Give you the option to receive updates about your genetic test results
Visit the **PIN NAME (LINK)** (PIN) to help us by sharing your genetic and health data! Sharing is safe and secure.

Visit the **PIN NAME (LINK)** to help us by sharing your genetic and health data! If you have signed up to share, don’t forget the second step! Upload a copy of your genetic test results.

**Step 1:** Choose to share by completing the ClinGen Data Sharing Program Survey

**Step 2:** Upload Your Genetic Testing Report
Visit the PIN NAME (LINK) to help us by sharing your genetic and health data! If you have signed up to share, don’t forget the second step! Upload a copy of your genetic test results. Don’t know how to upload your report watch this short video:

https://www.youtube.com/watch?v=3qQIKHurUTE&t=27s

Through the PIN NAME (LINK), you can share your genetic and health information securely and safely. From other registries, we know that families can share genetic data that may not otherwise be available to researchers and clinicians!
Informational Flyer

The informational flyer can be customized with your group’s name and logo.
As a member of a Patient Insights Network, you are contributing your information to help increase our knowledge and improve patient care!

Now, there is an easy way to make your data work even harder to help researchers.

ClinGen, an NIH-funded resource, is working to understand the relationship between genetics and health to improve patient care and research. This effort relies on gathering more information through data sharing.

Your Patient Insights Network is working with ClinGen to help people like you share their genetic and health information.

Data sharing can ...

- Help us better understand genetic changes and can help others get clearer genetic test results
- Increase our understanding of a condition’s features, which may help identify possible interventions and treatments
- Give you the option to receive updates about your genetic test results

Brief How-To Video

http://bit.ly/2C5Reu8

Your registry is working with members of the ClinGen team to give you the option to share your genetic and health data to increase our understanding of genetics!

This video will explain how you can participate!
Group Specific Webinars

The team at ClinGen that is facilitating data sharing would be happy to set-up a live or recorded webinar for scientific advisory committees, board member, or potential participants.
Sample Webinar – CureCADASIL Participants

- Webinar can be customized for each group and can be delivered live, through a recording, or possibly as an in-person discussion at a family meeting.
Press Release
Sample Language

Given that ClinGen is an NIH funded research initiative, there are restrictions regarding logo and name use. The following is sample wording from a previous release that describes the program and ClinGen.

All press releases need to be reviewed and approved by ClinGen. Please consider this when drafting the release and allow for extra time to review.
______ is working with Geisinger, a National Institutes of Health (NIH) Clinical Genome Resource (ClinGen) grantee to share genetic and health information from. Geisinger, as a ClinGen grantee, plans to help rare disease patient advocacy groups collect and share genetic and health information to increase our understanding of genomics. Through their existing registry, ______ will participate in the Patient Data Sharing Program to have certified genetic counselors review and share participants’ de-identified genetic and health information. Registry participants are able to direct whether or not they would like their de-identified data shared. Data sharing can help support ClinGen’s efforts to better understand the relationship between genetics and health. It can help clarify uncertain genetic testing results and provide more information about a condition to inform treatment and management.

**About ClinGen & ClinVar**

ClinGen is an NIH-funded effort dedicated to identifying clinically relevant genes and variants for use in precision medicine and research. ClinVar is a freely accessible, public archive of reports of the relationships among human variations and phenotypes hosted by the National Center for Biotechnology Information (NCBI) and funded by the Intramural National Institutes of Health (NIH). ClinGen investigators work closely with NCBI regarding the development and functionality of ClinVar and to support data deposition from many sources including genetic testing laboratories, researchers, and patients.
Email Campaign

An email campaign is programmed into the registry and can be viewed on the following slides. If additional newsletters or emails are desired, this can be discussed.
Invitation to Participate

Sent 1 week after registration in a PIN program offering the program. Participants are automatically removed from further emails once they have taken the ClinGen Informed Consent survey.

[Includes the PIN Logo for the program to which the receiver belongs]

Subject: Invitation to Participate in ClinGen Data Sharing Program

Dear [Account Holder First Name],

The Invitae Patient Insights Networks (PIN) (Patient Insights Network) is working with the Clinical Genome Resource (ClinGen) to invite you to choose to share your genetic and health information to help us better understand the relationship between genetics and health. Based on your survey answers, it appears that you have had genetic testing, so please read on to learn about an opportunity to share your de-identified information.

Why is this data sharing needed?
When a laboratory finds a genetic change (variant) for the first time, often little is known about it. Even if a genetic variant is well understood, data sharing helps increase understanding of a condition’s features, which may help identify possible interventions and treatments. The more information collected, the better researchers will understand how genes affect health and, ultimately, how best to care for patients.

Why participate?
• Help clinicians, researchers, and other patients by increasing our understanding of your condition
• Have the option to receive updates about your genetic test results when there may be new information
• Make a difference by helping others with the same condition get more definitive results from genetic testing

What do I need to do?
You would not have to do much more to participate! To review the consent and opt to share your data, simply:
1. Login to your account at: Invitae Patient Insights Networks.
2. Review and complete the ClinGen Data Sharing Program informed consent survey.
3. Upload a copy of your genetic testing report to your account, if you have not already.

Individuals that choose to participate will have their de-identified genetic and health information shared to help us better understand the relationship between genetics and health. In the future, we may ask you to complete optional, additional questions through your account. Learn more by watching our short videos here.

For questions about this opportunity to share your data, call or email ClinGen at datashare@clinicalgenome.org or 570-214-1721 (toll free 855-322-7683).

Having difficulty or have questions about your account? Contact the PIN Coordinator at coordinator@pin.invitae.com.

Thank you,

Invitae Patient Insights Networks Coordinator
Sent 3 weeks after registration in a PIN program offering the program.

Subject: An Opportunity to Participate in ClinGen Data Sharing Program

Dear [Account Holder First Name],

The Invitee Patient Insights Networks PIN (Patient Insights Network) is working with the Clinical Genome Resource (ClinGen) to invite you to choose to share your genetic and health information to help us better understand the relationship between genetics and health. Based on your survey answers, it appears that you have had genetic testing, so please read on to learn about an opportunity to share your de-identified information.

Why is this data sharing needed?

When a laboratory finds a genetic change (variant) for the first time, often little is known about it. Even if a genetic variant is well understood, data sharing helps increase understanding of a condition’s features, which may help identify possible interventions and treatments. The more information collected, the better researchers will understand how genes affect health and, ultimately, how best to care for patients.

Why participate?

- Help clinicians, researchers, and other patients by increasing our understanding of your condition
- Have the option to receive updates about your genetic test results when there may be new information
- Make a difference by helping others with the same condition get more definitive results from genetic testing

What do I need to do?

You would not have to do much more to participate! To review the consent and opt to share your data, simply:

1. Login to your account at Invitee Patient Insights Networks.
2. Review and complete the ClinGen Data Sharing Program informed consent survey.
3. Upload a copy of your genetic testing report to your account, if you have not already.
Adding Your Registry to the ClinGen Website

Once your registry submits to ClinVar, you can request that your registry be added to the ClinGen website.
Requirements:

- Registry submissions are submitted to ClinVar as ‘Phenotyping Only’ submissions.
- Registry submits at least once per year adding new variants and updating variants as necessary.
- Registry has attested to submitting at least 75% of all variants submitted to their registry in the last year.
- Registry submits all categories of variants (pathogenic, uncertain, benign, etc.) that are reported on participants’ genetic testing reports.

To apply for status, or to update your status, patient registries can apply [here](http://bit.ly/registrydata).

Questions about the criteria? Contact clingen@clinicaigenome.org.

---

### Additional Achievements

<table>
<thead>
<tr>
<th>Patient Registry</th>
<th>Meets requirements</th>
<th>Submitted &gt;100 variants</th>
<th>&gt;75% from past 5 years</th>
<th>Classification updates to participants</th>
<th>Participant matching mechanism</th>
</tr>
</thead>
<tbody>
<tr>
<td>GenomoConnect</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
<td></td>
</tr>
</tbody>
</table>

Some requirements and additional achievements based on self-reported data by laboratory:

1> Most recent submission pending ClinVar processing
2> >75% of classified sequence and/or copy number variants from past 5 years submitted
3> Actively provides participants with the option to receive information from the registry about potential updates to their variant classifications at the reporting laboratory
4> Registry provides participants with the ability to match with others based on genetic information (gene or variant)
